Application for Software Engineer

To whom this may concern,

I am a 4th year CS student graduating at the end of this year. I completed a 16-month internship at Red Hat working as a Cloud Engineer. There, I confirmed my interest in pursuing a career in DevOps and working with cloud technologies such as Kubernetes and Docker.

I have a deep passion for open source projects/FOSS; I have been using Linux since 2017, use Arch Linux as my daily OS and am familiar with all sorts of shell scripts from my dotfiles (which I backup in a [repository](#)). During my internship at Red Hat, I used Golang to work on the [Kubernetes operator](#) for my team's product. I have worked on [many side projects](#) involving Python/JavaScript using frameworks such as Django/React. I have experience with CI/CD from creating the [Jenkins release pipeline](#) from my internship at Red Hat.

To conclude, I would love to return to Red Hat to work full-time. I had a great experience working there, and many of my former co-workers have offered to write me a recommendation. You can find recommendations from my Red Hat manager, co-worker and mentee on [my LinkedIn](#).

Sincerely,

Kevin Mok
